- (p) Are friends and visitors above suspicion if not, who is suspected?

Do not apply.

Remarks

(Any outstanding or peculiar feature to be commented on by investigating officer).

At 10-15am. on 9/1/40 G.D.C. 230 attached to the Special Branch came to Sinza Station with S.S.D. Court Summonses No. 6206 and 6207 for the two accused as described on Sheet 1, they being the publisher-editor and printer respectively of the "Shanghai News".

The two accused are charged with having published an indecent article in this newspaper on December 20th and 21st, a translation being:

"Prior to coition, the genital organs of the two sexes are frequently developed into the state suitable for coaption. In order to be able to be inserted into the orifice, the male organ must be erect, whereas the external part of the vagina must also be to some extent responsive to enable to insertion of the male organ. At the time of coition, the vestibule of the vagina is expanded with blood and the laborium presents a visible swelling, particularly the clitoris, which is the most sensitive part of the female organ and through which friction is raised. In the meantime the various glands in the genital organ emit sticky fluid moistening every part of the vestibule. The friction between the two organs enhances the physical enjoyment of the two parties and discharge follows, which is not limited to the male sex. In the course of the ejaculation of the semen, the vestibule of the vagina contracts, and the discharge of semen marks the climax of the sexual intercourse. According to latest research, the female sex is not actually placed in the passive position and in fact she also plays an active part. At this juncture the entire portion of her genital organ undergoes a systematic contraction, the womb descends and opens in order to take in the semen. After the semen discharge, it enters the stage of retirement. The sensation of relaxation gives comfort to the whole body."

Assistance was given by G.D.C. 99, and the summonses were served. The hearing is on 18/1/40.
